

Scatcom

-By Distributed Slingers

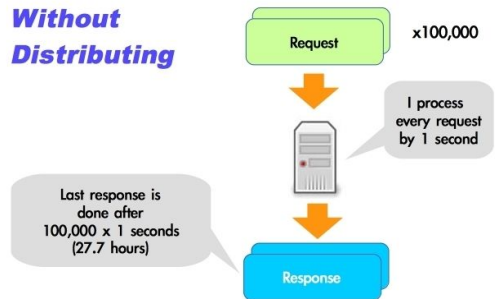

Need for distributed computing:

- Computation power is a major limitation for a user with normal a system.
- It's not possible for everyone to afford computers with heavy computations.
- It can multifold the existing computation limits of even a super computer.
- Many algorithms teks hours to execute which xca be reduced by using distributing its operational load.

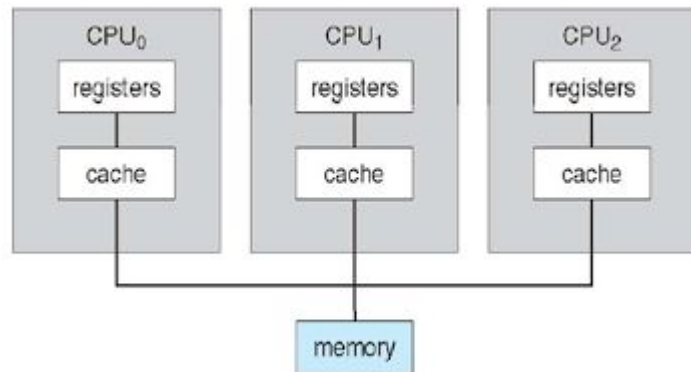

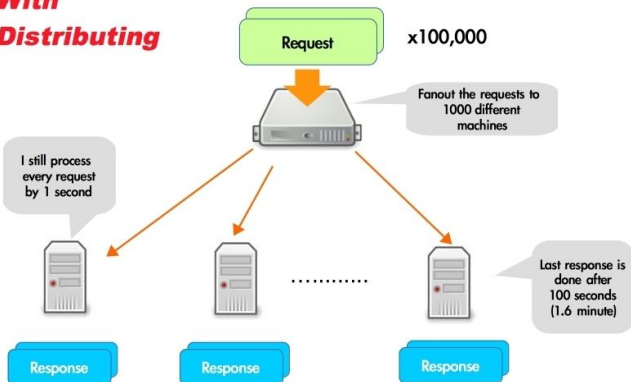

What our HACK do?

Without Distributing

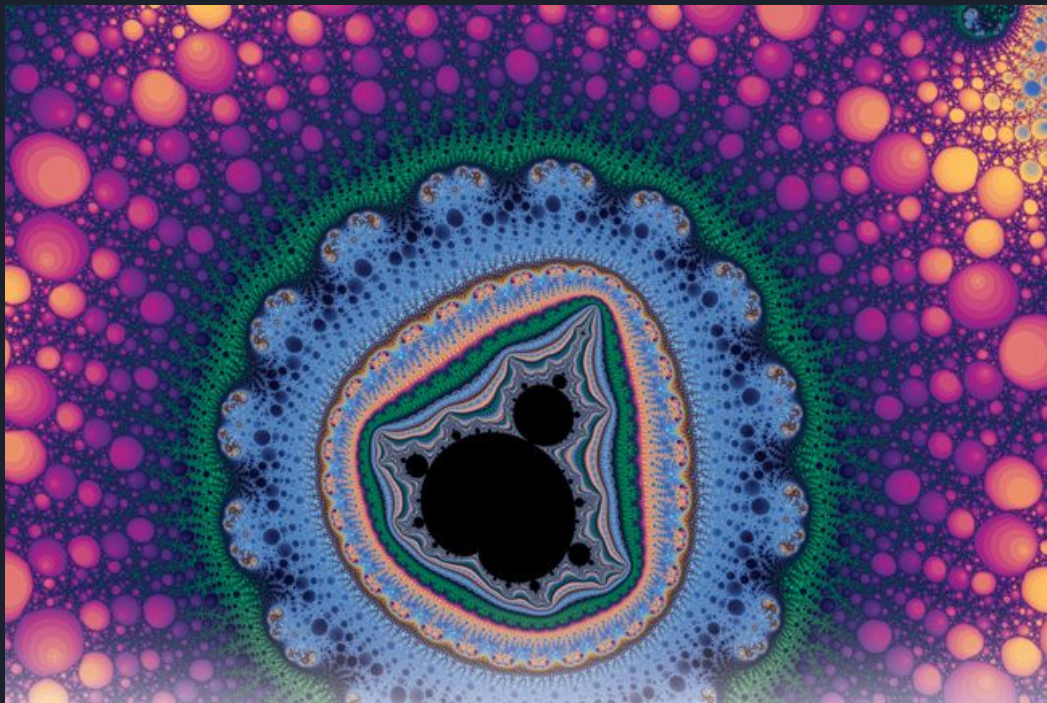

With Distributing

Number of iteration for
1000*1000 image are
approximately 10^9 .

Possibilities?

Thank You
